## Handout - Unit Conversions (Dimensional Analysis)

This section will cover conversions (1) selected units in the metric and American systems, (2) compound or derived measures, and (3) between metric and American systems. Also, (4) applications using conversions will be presented.

The metric system is based on a set of basic units and prefixes representing powers of 10 .

| Basic units |  |
| :--- | :--- |
| length | meter $(\mathrm{m})$ |
| mass | $\operatorname{gram}(\mathrm{g})$ |
| volume | liter $(\mathrm{L})$ |
| time | second $(\mathrm{s})$ |
| temperature | Celsius or Centigrade $\left({ }^{\circ} \mathrm{C}\right)$ <br> Kelvin $\left({ }^{\circ} \mathrm{K}\right)$ |

| Prefixes (The units that are in bold are the ones commonly used.) |  |  |
| :---: | :---: | :---: |
| prefix | symbol | value |
| yotta | Y | $1,000,000,000,000,000,000,000,000=10^{24}$ |
| zetta | Z | $1,000,000,000,000,000,000,000=10^{21}$ |
| exa | E | $1,000,000,000,000,000,000=10^{18}$ |
| peta | P | $1,000,000,000,000,000=10^{15}$ |
| tera | T | $1,000,000,000,000=10^{12}$ |
| giga | G | $1,000,000,000=10^{9}$ ( a billion) |
| mega | M | $1,000,000=10^{6}$ ( a million) |
| kilo | k | $1,000=10^{3}$ |
| hecto | h | $100=10^{2}$ |
| deca | da | 10 |
|  |  | 1 |
| deci | d | $\frac{1}{10}=0.1=10^{-1}$ |
| centi | c | $\frac{1}{100}=\mathbf{0 . 0 1}=\mathbf{1 0}^{-2}$ |
| milli | m | $\frac{1}{1,000}=\mathbf{0 . 0 0 1}=\mathbf{1 0}^{-\mathbf{3}}$ (a thousandth) |
| micro | $\mu$ (the Greek letter mu) | $\frac{1}{1,000,000}=0.000001=10^{-6}(\text { a millionth })$ |
| nano | n | $\frac{1}{1,000,000,000}=0.000000001=10^{-9} \quad(\mathrm{a}$ billionth $)$ |

To get a sense of the size of the basic units of meter, gram and liter consider the following examples.
The standard height of a door handle or knob is 1 meter.

The weight of a penny is 2.5 grams.

Almost everyone is familiar with 2 liter bottles of soda.

The next set of examples illustrates the use of some of the most used prefixes.

## Examples:

1. 1 milligram $=\frac{1}{1,000}$ gram $=0.001$ gram, or $1 \mathrm{mg}=\frac{1}{1,000} \mathrm{~g}=0.001$ gram
2. $1000 \mathrm{mg}=1 \mathrm{~g}$
3. 1 milliliter $=\frac{1}{1,000}$ liter $=0.001$ liter, or $1 \mathrm{~mL}=\frac{1}{1,000} \mathrm{~L}=0.001 \mathrm{~L}$
4. $1,000 \mathrm{~mL}=1 \mathrm{~L}$
5. 1 centimeter $=\frac{1}{100}$ meter $=0.01$ meter, or $1 \mathrm{~cm}=\frac{1}{100} \mathrm{~m}=0.01 \mathrm{~m}$
6. 1 kilogram $=1,000$ grams, or $1 \mathrm{~kg}=1,000 \mathrm{~g}$
7. 1 kilometer $=1,000$ meters, or $1 \mathrm{~km}=1000 \mathrm{~m}$
8. 1 microgram $=\frac{1}{1,000,000} \mathrm{~g}=.000001 \mathrm{~g}$, or $1 \mathrm{mcg}=\frac{1}{1,000,000} \mathrm{~g} ; 1,000,000 \mathrm{mcg}=1 \mathrm{~g}$
9. 1 nanosecond $=\frac{1}{1,000,000,000}$ second $=.000000001$ seconds, or a billionth of a second

$$
1 \mathrm{~ns}=\frac{1}{1,000,000,000} \mathrm{~s}=.000000001 \mathrm{~s} ; 1,000,000,000 \mathrm{~ns}=1 \mathrm{~s}
$$

10. 1 kilobyte $=1000$ bytes (a byte is a unit used in computers to express the length of a "word".)
11. 1 megabyte $=1,000,000$ bytes $=1000$ kilobytes

## Conversion Tables

The American system of measurements is based on the English system.

| CAPACITY (volume) |
| :--- |
| 1 gallon $=1 \mathrm{gal}=4$ quarts $=4 \mathrm{qts}$ |
| 1 quart $=1 \mathrm{qt}=2$ pints $=2 \mathrm{pt}$ |
| 1 pint $=1 \mathrm{pt}=2 \mathrm{cups}=2 \mathrm{c}=16$ fluid ounces $=16 \mathrm{fl} \mathrm{oz}$ |
| 1 cup $=1 \mathrm{c}=8$ <br> is not the same as the weight measure ounce. |
| 1 fluid ounce $=1 \mathrm{fl} \mathrm{oz}=2$ tablespoons $=2 \mathrm{fbsp}$ |
| 1 tablespoon $=1 \mathrm{tbsp}=3$ teaspoons $=3 \mathrm{tsp}$ |
| 1 fluid ounce $=1 \mathrm{fl} \mathrm{oz}=480$ minims ( A minim is an |
| apothecaries' measure.) |

| TEMPERATURE |
| :--- |
| Temperature is measured in degrees Fahrenheit $\left({ }^{\circ} \mathrm{F}\right)$ |
| (At sea level, water freezes at $32{ }^{\circ} \mathrm{F}$ and boils at $212{ }^{\circ} \mathrm{F}$.) |
| Remember: the metric system measurement for |
| temperature are Celsius $\left({ }^{\circ} \mathrm{C}\right)$ and Kelvin $\left({ }^{\circ} \mathrm{K}\right)$. |
| The formulas used for temperature conversions are |
| $\mathrm{F}=\frac{9}{5} \mathrm{C}+32$ |
| $\mathrm{C}=\frac{5}{9}(\mathrm{~F}-32)$ |
| $\mathrm{K}=\mathrm{C}+273.15$ |
| $\mathrm{C}=\mathrm{K}-273.15$ |

| LENGTH |
| :--- |
| 1 foot $=1 \mathrm{ft}=12$ inches $=12 \mathrm{in}$ |
| 1 yard $=1 \mathrm{yd}=3 \mathrm{feet}=3 \mathrm{ft}=36 \mathrm{in}$ |
| 1 rod $=5.5 \mathrm{yd}=16.5 \mathrm{ft}=198 \mathrm{in}$ |
| 1 furlong $=220 \mathrm{yd}$ |
| 1 mile $=1 \mathrm{mi}=5280$ feet $=5280 \mathrm{ft}=$ |
| $1760 \mathrm{yd}=8$ furlongs |$\quad$| TIME |
| :--- |
| 1 minute $=1 \mathrm{~min}=60$ seconds $=60 \mathrm{~s}$ |
| 1 hour $=1 \mathrm{hr}=60 \mathrm{~min}$ |
| 1 day $\quad=24 \mathrm{hr}$ |

## MASS

437.5 grains $=1$ ounce $=1 \mathrm{oz}$

1 pound $=1 \mathrm{lb}=16$ ounces $=16 \mathrm{oz}$
1 ton $=2000$ pounds $=2000 \mathrm{lb}$ (This is sometimes called a short ton or ton(US). A long ton or ton(UK) is equal to 2240 pounds.)

| CONVERSIONS TO AMERICAN |
| :--- |
| 1 meter $=1.0936$ yards $=3.2808$ feet $=$ |
| 39.37 inches |
| 1 kilometer $=.62137$ miles |
|  |
| 1 gram $=.03527$ ounces |
| 1 kilogram $=35.27$ ounces $=2.205$ <br> pounds |
| 1 liter $=.26417$ gallons $=1.0567$ quarts |
| $\mathrm{F}=\frac{9}{5} \mathrm{C}+32$ |
| $\mathrm{~F}=\frac{9}{5}(\mathrm{~K}-273.15)+32$ |

| CONVERSIONS TO METRIC |
| :--- |
| 1 inch $=0.0254$ meters $=2.54$ centimeters |
| 1 yard $=0.9144$ meters |
| 1 mile $=1609.344$ meters $=1.609344$ kilometers |
| 1 pound $=453.59237$ grams |
| 1 ounce $\approx 28.35$ grams |
| 1 grain $\approx 0.065$ grams $=65$ milligrams |
| 1 gallon $\approx 3.784$ liters |
| 1 quart $\approx .9464$ liters |
| 1 fluid ounce $\approx .02957$ liters $=29.57$ milliliters |
| 1 teaspoon $\approx .00493$ liters $=4.93$ milliliters |
| 1 minim $=.062$ milliliters |
| 1 tsp $=4.93 \mathrm{~mL}$ |
| 1 tbsp $=14.8 \mathrm{~mL}$ |
| 1 grain $(\mathrm{a}$ small unit of weight $)=65 \mathrm{mg}=.065 \mathrm{~g}$ |
| $\mathrm{C}=\frac{5}{9}(\mathrm{~F}-32)$ |
| $\mathrm{K}=\frac{5}{9}(\mathrm{~F}-32)+273.15$ |

Milliliters are used extensively in the sciences and medicine. The abbreviation "cc" is often used instead of $\mathbf{m L}$. The relation of $\mathbf{m L}$ to volume is given by

$$
1 \mathrm{~mL}=1 \mathrm{cc}=1 \mathrm{~cm}^{3}
$$

## Areas and volumes

Recall that area is measured in squares. One square foot or $1 \mathrm{ft}^{2}$ represents the area covered by a square 1 foot by 1 foot.

## Example:

12 square feet $=12 \mathrm{ft}^{2}$ means 12 squares 1 foot by 1 foot. The measure of the area of a rectangle 3 ft by 4 ft is $12 \mathrm{ft}^{2}$ since it can be covered (tiled) with 12 squares each 1 foot by 1 foot.

| 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: |
| 5 | 6 | 7 | 8 |
| 9 | 10 | 11 | 12 |

Volume is measured in cubes. One cubic centimeter or $1 \mathrm{~cm}^{3}$ represents the volume that can be covered by a cube 1 cm by 1 cm by 1 cm .

Example: Find the volume of a box 3 cm by 3 cm by 4 cm . The question is, how many cubes 1 cm on a side can be put into this box. $3 \mathrm{~cm} \times 3 \mathrm{~cm} \times 4 \mathrm{~cm}=36 \mathrm{~cm}^{3}$.

That is, the box will hold 36 cubes 1 cm by 1 cm by 1 cm .

A table could be made for areas and another could be made for volumes. The tables would include facts like $1 \mathrm{ft}^{2}=144 \mathrm{in}^{2}, 1 \mathrm{yd}^{2}=9 \mathrm{ft}^{2}, 1 \mathrm{~m}^{2}=10000 \mathrm{~cm}^{2}, 1 \mathrm{ft}^{3}=1728 \mathrm{in}^{3}$, etc. Fortunately, as shown below, this is not necessary.

This handout will cover one method commonly used in the sciences to convert units. This method uses multiples of " 1 " in a convenient form.

## Examples:

a) $4000 \mathrm{in}=? \mathrm{ft}$

Notice that $1 \mathrm{ft}=12 \mathrm{in}$. We write our " 1 " as $\frac{1 f t}{12 \mathrm{in}}$ so that "in" in 4000 in will cancel.

$$
4,000 i n=\frac{4,000 i n}{1} \cdot \frac{1 f t}{12 i n}=\frac{4,000}{12} f t \approx 333.33 f t . \quad \text { notice that the "in" canceled }
$$

b) $18 \mathrm{ft}=$ ? in

Notice that $1 \mathrm{ft}=12 \mathrm{in}$. This time we write our " 1 " as $12 \mathrm{in} / 1 \mathrm{ft}$ so that the " ft " cancel leaving

$$
18 f t=\frac{18 f t}{1} \cdot \frac{12 i n}{1 f t}=216 i n
$$

c) $2.3 \mathrm{mi}=$ ? in

From the conversion tables on page 3 notice that $1 \mathrm{mi}=5280 \mathrm{ft}$ and $1 \mathrm{ft}=12 \mathrm{in}$. So we should write our " 1 " in two different ways $1=\frac{5280 f t}{1 m i}$ and as $1=\frac{12 i n}{1 f t}$. Using the first fraction we can convert miles into feet, while using the second fraction we can further convert the feet into inches. Combining these two we have the following:

$$
2.3 m i=\frac{2.3 m i}{1} \frac{5280 f t}{1 m i} \frac{12 i n}{1 f t}=\frac{(2.3)(5280)(12)}{1} \mathrm{in}=145728 \mathrm{in}
$$

notice that the "mi" and the " ft " cancel.
d) $146000 \mathrm{~cm}=$ ? km

Just like in the previous example we don't have a direct conversion between centimeters (cm) and kilometers (km). However, both are connected through meters (m). Therefore, we will use the " 1 " in two different ways: $1=\frac{1 \mathrm{~m}}{100 \mathrm{~cm}}$ and $1=\frac{1 \mathrm{~km}}{1000 \mathrm{~m}}$. Using both, we get the following:

$$
146000 \mathrm{~cm}=\frac{146000 \mathrm{~cm}}{1} \frac{1 \mathrm{~m}}{100 \mathrm{~cm}} \frac{1 \mathrm{~km}}{1000 \mathrm{~m}}=\frac{146000}{(100)(1000)} \mathrm{km}=1.46 \mathrm{~km}
$$

notice that the "cm" and the " $m$ " cancel
e) $1,000,000 \mathrm{fl} \mathrm{oz}=$ ? gal

From the conversion tables on page 3 , we see that $1 p t=16 \mathrm{fl} \mathrm{oz}, 1 q t=2 p t$
$1 p t=16 \mathrm{floz}, 1 q t=2 \mathrm{pt}$ and $1 \mathrm{gal}=4 q t$. We have to combine all three of these conversions to go from fluid ounces to gallons:

$$
1000000 \mathrm{fl} \mathrm{oz}=\frac{1000000 \mathrm{fl} \mathrm{oz}}{1} \frac{1 \mathrm{pt}}{16 \mathrm{fl} \mathrm{oz}} \frac{1 q t}{2 p t} \frac{1 \mathrm{gal}}{4 q t}=\frac{1000000}{(16)(2)(4)} \mathrm{gal}=7812.5 \mathrm{gal}
$$

notice that the "fl oz", the "pt", and the "qt" cancel.
f) $18 \mathrm{ft}^{2}=? \mathrm{yd}^{2}$

The following is the standard method for handling areas and volumes. The conversion tables on page 3 say that $1 y d=3 f t$. For square units, we have to use this conversion twice so that " $\mathrm{ft}{ }^{2}$ " cancels with " $\mathrm{ft} \cdot \mathrm{ft}$ ".

$$
18 f t^{2}=\frac{18 f t^{2}}{1} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t}=\frac{18}{(3)(3)} y d^{2}=2 y d^{2}
$$

Another way to obtain the same result is to create a new conversion formula for our specific purpose. Since $1 y d=3 f t$ we immediately have $1 y d^{2}=3 f t \cdot 3 f t=9 f t^{2}$ and $18 f t^{2}=\frac{18 f t^{2}}{1}=\frac{18 f t^{2}}{1} \cdot \frac{1 y d^{2}}{9 f t^{2}}=2 y d^{2}$
g) $1,000,000 \mathrm{~mm}^{2}=? \mathrm{~km}^{2}$

This time we will use two conversions $1 \mathrm{~m}=1000 \mathrm{~mm}$ and $1 \mathrm{~km}=1000 \mathrm{~m}$. Each of these two conversion will be used twice, since we are using square units:
$1000000 \mathrm{~mm}^{2}=\frac{1000000 \mathrm{~mm}^{2}}{1} \cdot \frac{1 \mathrm{~m}}{1000 \mathrm{~mm}} \cdot \frac{1 \mathrm{~m}}{1000 \mathrm{~mm}}=1 \mathrm{~m}^{2}$
Then we continue:

$$
1 \mathrm{~m}^{2}=1 \mathrm{~m}^{2} \cdot \frac{1 \mathrm{~km}}{1000 \mathrm{~m}} \cdot \frac{1 \mathrm{~km}}{1000 \mathrm{~m}}=0.000001 \mathrm{~km}^{2}
$$

Therefore $1000000 \mathrm{~mm}^{2}=0.000001 \mathrm{~km}^{2}$.
notice that " $\mathrm{mm}^{2}$ " cancels with " mm mm " in the first row, and " $\mathrm{m}^{2}$ " cancels with " m m " in the second row of calculations above.
h) $18 \mathrm{ft}^{3}=? \mathrm{yd}^{3}$

When dealing with cubic units, we have to apply each conversion formula three times. For example, since $1 y d=3 f t$, we can apply this conversion three times so that " $\mathrm{ft}^{3}$ " cancels with " $\mathrm{ft} \cdot \mathrm{ft} \cdot \mathrm{ft}$ ".

$$
18 f t^{3}=\frac{18 f t^{3}}{1} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t}=\frac{18}{(3)(3)(3)} y d^{3}=\frac{2}{3} y d^{3}
$$

Or, as in the example f) above, we can create our own conversion formula
$1 y d^{3}=3 \mathrm{ft} \cdot 3 \mathrm{ft} \cdot 3 \mathrm{ft}=27 \mathrm{ft}^{3}$ and use it directly:
$18 f t^{3}=\frac{18 f t^{3}}{1} \frac{1 y d^{3}}{27 f t^{3}}=\frac{18}{27} y d^{3}=\frac{2}{3} y d^{3}$
i) $8 \mathrm{~mL}=$ ? cc

This is a straight forward conversion, since $1 c c=1 \mathrm{~mL}$ :
$8 m L=\frac{8 m L}{1} \frac{1 c c}{1 m L}=8 c c$
j) $3 \mathrm{~L}=$ ? cc

This time we have to use two conversions in a row: $1 \mathrm{~L}=1000 \mathrm{~mL}$ and $1 \mathrm{~mL}=1 \mathrm{cc}$ :

$$
3 L=\frac{3 L}{1} \frac{1000 m L}{1 L} \frac{1 c c}{1 m l}=\frac{(3)(1000)}{1} c c=3000 c c
$$

k) $1 \mathrm{~m}^{3}=$ ? cc

For cubic units, we use conversion formulas three times:

$$
1 m^{3}=\frac{1 m^{3}}{1} \frac{100 \mathrm{~cm}}{1 m} \frac{100 \mathrm{~cm}}{1 m} \frac{100 \mathrm{~cm}}{1 m} \frac{1 c c}{1 \mathrm{~cm}^{3}}=\frac{(100)(100)(100)}{1} c c=1000000 c c
$$

Alternatively, we can derive our own conversion formula for cubic units. Using $1 \mathrm{~m}=100 \mathrm{~cm}$, we get $1 \mathrm{~m}^{3}=100 \mathrm{~cm} \cdot 100 \mathrm{~cm} \cdot 100 \mathrm{~cm}=1000000 \mathrm{~cm}^{3}$.

1) $42^{\circ} \mathrm{C}=?{ }^{\circ} \mathrm{K}$

Use the temperature conversion formulas from the table on page 3.

$$
\begin{aligned}
& \mathrm{K}=\mathrm{C}+273.15 \\
& \mathrm{~K}=(42+273.15)^{\circ} \mathrm{K}=315.15^{\circ} \mathrm{K}
\end{aligned}
$$

m) $74^{\circ} \mathrm{F}=$ ? ${ }^{\circ} \mathrm{C}$
$\mathrm{C}=\frac{5}{9}(\mathrm{~F}-32)$
$\mathrm{C}=\frac{5}{9}(74-32)^{\circ} \mathrm{C} \approx 23.3^{\circ} \mathrm{C}$
n) $29^{\circ} \mathrm{C}=$ ? ${ }^{\circ} \mathrm{F}$
$\mathrm{F}=\frac{9}{5} \mathrm{C}+32$
$\mathrm{F}=\left[\frac{9}{5}(29)+32\right]^{\circ} \mathrm{F}=84.2{ }^{\circ} \mathrm{F}$

## Compound Measures

We now look at what is sometimes called compound measures:
miles per hour $=\mathrm{mi} / \mathrm{hr}, \mathrm{ft} / \mathrm{sec}, \mathrm{lb} / \mathrm{ft}^{2}, \mathrm{~g} / \mathrm{cm}^{3}$ etc.

## Examples

a) If a car is traveling $90 \mathrm{mi} / \mathrm{hr}$, how many feet will the car travel in 1 sec ? In 5 sec ?

A direct way to convert these units is:
$90 m i / h r=\frac{90 m i}{1 h r} \frac{5280 f t}{1 m i} \frac{1 \mathrm{hr}}{60 \min } \frac{1 \mathrm{~min}}{60 \mathrm{sec}}=\frac{(90)(5280)}{(60)(60)} \mathrm{ft} / \mathrm{sec}=132 \mathrm{ft} / \mathrm{sec}$
Alternatively, we can derive our own conversion formulas separately for miles and for hours:
$1 \mathrm{mi}=5280 \mathrm{ftt}$ and $1 \mathrm{hr}=60 \mathrm{~min}=60 \cdot 60 \mathrm{sec}=3600 \mathrm{sec}$. We then replace miles with
5280 feet and hours with 3600 sec . Therefore
$\frac{90 \mathrm{mi}}{1 \mathrm{hr}}=\frac{90 \cdot 5280 \mathrm{ft}}{3600 \mathrm{sec}}=132 \mathrm{ft} / \mathrm{sec}$
In 1 second the car will travel 132 ft . The car will travel $(5 \mathrm{sec})(132 \mathrm{ft} / \mathrm{sec})=660 \mathrm{ft}$. in 5 seconds.
b) A 90 lb weight is applied to an area $1 / 4 \mathrm{in}$ by $1 / 4 \mathrm{inch}$. This pressure is equivalent to how many tons per $\mathrm{ft}^{2}$ ?

We have 90 pounds per $(1 / 4)(1 / 4) \mathrm{in}^{2}$. We have $\left[90 \mathrm{lb} /(1 / 16) \mathrm{in}^{2}\right]=1440 \mathrm{lb} / \mathrm{in}^{2}$.
$1440 \mathrm{lb} / \mathrm{in}^{2}=\frac{1440 \mathrm{lb}}{1 \mathrm{in}^{2}} \frac{1 \text { ton }}{2000 \mathrm{lb}} \frac{12 \mathrm{in}}{1 \mathrm{ft}} \frac{12 \mathrm{in}}{1 \mathrm{ft}}=\frac{(1440)(12)(12)}{2000}$ ton $/ \mathrm{ft}^{2}=103.68 \mathrm{ton} / \mathrm{ft}^{2}$
c) If a machine produces 225 parts in an 8 hour day, how many minutes will it take to produce 10 parts?

We will first get minutes per part.

$$
\frac{8 \text { hours }}{225 \text { parts }} \cdot \frac{60 \mathrm{~min}}{1 \text { hour }}=\frac{8(60)}{225} \mathrm{~min} / \text { part }=\frac{32}{15} \mathrm{~min} / \text { part }
$$

The time needed for 10 parts would be $(10)(32 / 15)$ minutes $=64 / 3$ minutes $=21 \_$minutes.
d) If a machine produces 225 parts in an 8 hour day, how many parts can it produce in 10 minutes?

We will first get parts per minute. Notice that we have parts in the numerator since we want parts in the final answer.
$\frac{225 \mathrm{parts}}{8 \text { hours }} \cdot \frac{1 \text { hour }}{60 \mathrm{~min}}=\frac{225}{8(60)}$ parts $/ \mathrm{min}=\frac{15}{32}$ parts $/ \mathrm{min}$
In 10 minutes, the machine would produce $10 \cdot \frac{15}{32}$ parts $=\frac{75}{16}$ parts $=.4 \frac{11}{16}$
e) Water is pouring into a plastic box 1 m by 1 m by .3 m at the rate of 125 mL per minute. How long will it take in hours to fill this box?

The volume of the box is $1 \mathrm{~m} \times 1 \mathrm{~m} \times .3 \mathrm{~m}=.3 \mathrm{~m}^{3}$.
In 1 minute, 125 mL will drip into the box. We will convert mL to $\mathrm{cm}^{3}$ to $\mathrm{m}^{3}$ and minutes to hours.

$$
\frac{1 \mathrm{~min}}{125 \mathrm{~mL}} \cdot \frac{1 \mathrm{~mL}}{1 \mathrm{~cm}^{3}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{1 \mathrm{hr}}{60 \mathrm{~min}}=\frac{(100)(100)(100)}{(125)(60)} \frac{\mathrm{hr}}{\mathrm{~m}^{3}} \approx 133.33 \frac{\mathrm{hr}}{\mathrm{~m}^{3}}
$$

133.33 hrs for each $\mathrm{m}^{3}$. It will take (133.33)(.3) $\mathrm{hr}=40 \mathrm{hr}$ to fill the box

## Homework:

1. $1000 \mathrm{yd}=$ ? in
2. $1,000,000 \mu \mathrm{~g}=$ ? g
3. $2000 \mathrm{in}=? \mathrm{ft}$
4. $1,000,000 \mathrm{mg}=$ ? g
5. $1,000,000 \mathrm{~cm}=$ ? m
6. $2000 \mathrm{ft}=$ ? in
7. $1000 \mathrm{yd}^{2}=$ ? $\mathrm{in}^{2}$
8. $2000 \mathrm{in}^{2}=$ ? $\mathrm{ft}^{2}$
$71000 \mathrm{in}^{2}=$ ? yd
9. $2000 \mathrm{ft}^{2}=$ ? $\mathrm{in}^{2}$
10. $1000 \mathrm{yd}^{3}=$ ? $\mathrm{in}^{3}$
11. $2000 \mathrm{in}^{3}=$ ? $\mathrm{ft}^{3}$
12. $1000 \mathrm{in}^{3}=$ ? $\mathrm{yd}^{3}$
13. $2000 \mathrm{ft}^{3}=$ ? $\mathrm{in}^{3}$
14. $1,000,000 \mathrm{~mm}=$ ? cm
15. $1,000,000 \mathrm{mg}=$ ? cg
16. $1,000,000 \mathrm{~mm}=$ ? m
17. $1,000,000 \mathrm{~mL}=$ ? L
18. $1,000,000 \mu \mathrm{~m}=$ ? cm
19. $1,000,000 \mathrm{~mm}=? \mathrm{~km}$
20. $1,000,000 \mathrm{~cm}=$ ? km

65. A car traveling at a constant speed travels 175 miles in 4 hours. How many minutes will it take for the car to travel 1000 feet?
66. A car traveling at a constant speed travels 1000 ft in 12 seconds. In miles, how far will this car travel in 4 hours?
67. A car traveling at a constant speed travels 175 miles in 4 hours. How many feet will the car travel in 10 minutes?
68. A car traveling at a constant speed travels 1000 ft in 12 seconds. How long in hours will it take to travel 175 miles?
69. If a car is traveling 75 miles per hour, how many feet will it travel in 10 seconds?
70. If a car is traveling 75 kilometers per hour, how many meters will it travel in 10 seconds?
71. A leaky faucet drips at the rate of 1 pint per hour. How many gallons will drip in a 24 hour day?
72. A leaky faucet drips at the rate of 300 mL per hour. How many liters will drip in a 24 hour day?
73. A leaky faucet drips at the rate of 1 pint per hour. How long will it take to fill a 10 gallon container?
74. A leaky faucet drips at the rate of 300 mL per hour. How long will it take to fill a 10 liter container?
75. You wish to give a patient 5 liters of fluid intravenously in 24 hours. If this is done at a constant rate, how many cc must be given per minute?
76. You wish to give a patient 4 liters of fluid in 8 hours. If this is done at a constant rate, how many cc must be given per minute?
77. You are giving a patient $2.5 \mathrm{cc} / \mathrm{min}$ of a given solution intravenously. If this continues for 8 hours, how many liters of this solution will you need?
78. You are giving a patient $3 \mathrm{cc} / \mathrm{min}$ of a given solution intravenously. If this is done for 24 hours, how many liters of this solution will you need?
79. A recipe calls for 300 mL water. In the English system, how much water is this?
80. A recipe calls for 3 cups water. In the metric system, how much water is this?
81. A car is traveling $100 \mathrm{~km} / \mathrm{hr}$, How many feet does this car travel every second?
82. A car is traveling 100 miles / hour. How many meters does this car travel every second?
83. John has a bicycle whose tires are 27 inches in diameter. If John rides his bike 1 mile, how many revolutions does each tire make?
84. A vehicle has wheel 15 inches in diameter. If the vehicle travels 2 miles, how many revolutions does the wheel make?
85. 1000 inches is how many meters?
86. 450 millimeters is how many inches?
87. A large block of butter measures 2.3 meters by 3.4 meters by 5 meters. How many tablespoons of butter are in this block?
88. You wish to form a cube formed from $1,000,000$ tablespoons of butter. What is the length of a side in meters? feet? inches?
(Recall: a cube has length $=$ width $=$ height. $)$ 91. An automatic machine produces 1 part every 2.3 minutes. How many parts are produced in 8 hours if the machine runs constantly?
89. A machine produces 4500 parts in an 8 hour day. In minutes, how long will it take to produce 100 parts?
90. An automatic machine produces 1 part every 2.3 minutes. How long in hours will it take to produce 5000 parts?
91. If a machine produces 435 parts per hour. how many minutes will it take to produce each part?
92. A certain medication recommends that each day a person be given 8 mg for every 100 lbs of weight. John weighs 238 lbs . If his measurements are exact, How many kg of this medication will he take in 365 days?
93. A certain medication recommends that each day a person be given 8 mg for every 100 lbs of weight. If 10,000 people take this medication each day and their average weight is 180 lbs , how many kilograms of this drug are used daily?

## Solutions:

1. $1000 y d=\frac{1000 y d}{1} \frac{3 f t}{1 y d} \frac{12 i n}{1 f t}=(1000)(3)(12) i n=36000 \mathrm{in}$
2. $1000 \mathrm{in}=\frac{1000 \mathrm{in}}{1} \frac{1 f t}{12 i n} \frac{1 y d}{3 f t}=\frac{1000}{(12)(3)} y d=27 \frac{7}{9} y d$
3. $\frac{1000 y d^{2}}{1} \frac{3 f t}{1 y d} \frac{3 f t}{1 y d} \frac{12 i n}{1 f t} \frac{12 i n}{1 f t}=(1000)(3)(3)(12)(12) i^{2}=1296000 \mathrm{in}^{2}$
4. $\frac{1000 \text { in }^{2}}{1} \frac{1 f t}{12 \text { in }} \frac{1 f t}{12 i n} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t}=\frac{1000}{(12)(12)(3)(3)} y d^{2}=.77 y d^{2}$
5. $\frac{1000 y d^{3}}{1} \frac{3 f t}{1 y d} \frac{3 f t}{1 y d} \frac{3 f t}{1 y d} \frac{12 i n}{1 f t} \frac{12 i n}{1 f t} \frac{12 i n}{1 f t}=(1000)(3)(3)(3)(12)(12)(12) i n^{3}=46656000 \mathrm{in}^{3}$
6. $\frac{1000 \mathrm{in}^{3}}{1} \frac{1 f t}{12 \text { in }} \frac{1 f t}{12 \text { in }} \frac{1 f t}{12 i n} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t} \frac{1 y d}{3 f t}=\frac{1000}{(12)(12)(12)(3)(3)(3)} y d^{3}=.021 y d^{3}$
7. $\frac{1000000 \mathrm{~mm}}{1} \frac{1 \mathrm{~m}}{1000 \mathrm{~mm}} \frac{100 \mathrm{~cm}}{1 \mathrm{~m}}=\frac{(1000000)(100)}{1000} \mathrm{~cm}=100000 \mathrm{~cm}$
8. $\frac{1000000 \mathrm{~mm}}{1} \frac{1 \mathrm{~m}}{1000 \mathrm{~mm}}=\frac{1000000}{1000} \mathrm{~m}=1000 \mathrm{~m}$
9. $\frac{1000000 \mathrm{mg}}{1} \frac{1 g}{1000 \mathrm{mg}}=\frac{1000000}{1000} \mathrm{~g}=1000 \mathrm{~g}$
10. $\frac{1000000 m L}{1} \frac{1 L}{1000 m L}=\frac{1000000}{1000} L=1000 L$
11. $\frac{1000000 \mathrm{~mm}}{1} \cdot \frac{1 \mathrm{~m}}{1000 \mathrm{~mm}} \cdot \frac{1 \mathrm{~km}}{1000 \mathrm{~m}}=\frac{1000000}{(1000)(1000)} \mathrm{km}=1 \mathrm{~km}$
12. $\frac{1000000 \mathrm{mg}}{1} \frac{1 \mathrm{~g}}{1000 \mathrm{mg}} \frac{1 \mathrm{~kg}}{1000 \mathrm{~g}}=\frac{1000000}{(1000)(1000)} \mathrm{kg}=1 \mathrm{~kg}$
13. $\frac{1000000 \mathrm{~km}}{1} \frac{1000 \mathrm{~m}}{1 \mathrm{~km}}=(1000000)(1000) \mathrm{m}=1000000000 \mathrm{~m}$
14. $\frac{1000000 \mathrm{~km}}{1} \frac{1000 \mathrm{~m}}{1 \mathrm{~km}} \frac{100 \mathrm{~cm}}{1 \mathrm{~m}}=(1000000)(1000)(100) \mathrm{cm}=100000000000 \mathrm{~cm}=1 \times 10^{11} \mathrm{~cm}$
15. $\frac{1000000 \mathrm{~kg}}{1} \frac{1000 \mathrm{~g}}{1 \mathrm{~kg}}=(1000000)(1000) \mathrm{g}=1000000000 \mathrm{~g}$
16. $\frac{50 \mathrm{mi}}{1} \frac{5280 \mathrm{ft}}{1 m i} \frac{1 y d}{3 f t}=\frac{(50)(5280)}{3} y d=88000 y d$
17. $\frac{1000000 \text { tons }}{1} \frac{2000 \mathrm{lb}}{1 \text { ton }} \frac{16 \mathrm{oz}}{1 \mathrm{lb}}=(1000000)(2000)(16) \mathrm{oz}=32000000000 \mathrm{oz}=3.2 \times 10^{10} \mathrm{oz}$
18. $\frac{1000000 \mathrm{fl} \mathrm{oz}}{1} \frac{1 p t}{16 \mathrm{fl} \mathrm{oz}} \frac{1 q \mathrm{~g}}{2 \mathrm{pt}} \frac{1 \mathrm{gal}}{4 q t}=\frac{1000000}{(16)(2)(4)} \mathrm{gal}=7812.5 \mathrm{gal}$
19. $\mathrm{C}=\frac{5}{9}(\mathrm{~F}-32) ; \mathrm{C}=\frac{5}{9}(42-32)^{\circ} \mathrm{C} \approx 5.6^{\circ} \mathrm{C}$
20. $\mathrm{F}=\frac{9}{5} \mathrm{C}+32 ; \mathrm{F}=\frac{9}{5}(12)+32{ }^{\circ} \mathrm{F}=53.6{ }^{\circ} \mathrm{F}$
21. $\mathrm{K}=\mathrm{C}+273.15 ; \mathrm{K}=25+273.15^{\circ} \mathrm{K}=298.15^{\circ} \mathrm{K}$
22. $\frac{100 \mathrm{ft}}{1 \sec } \frac{1 \mathrm{mi}}{5280 \mathrm{ft}} \frac{60 \mathrm{sec}}{1 \mathrm{~min}} \frac{60 \mathrm{~min}}{1 \mathrm{hr}}=\frac{(100)(60)(60) \mathrm{mi}}{5280 \mathrm{hr}}=68.18 \mathrm{mi} / \mathrm{hr}$
23. $\frac{5 \mathrm{gal}}{1 \mathrm{~min}} \frac{60 \mathrm{~min}}{1 \mathrm{hr}}=(5)(60) \mathrm{gal} / \mathrm{hr}=300 \mathrm{gal} / \mathrm{hr}$
24. $\frac{3 g}{1 \mathrm{~cm}^{3}} \frac{1 \mathrm{~kg}}{1000 \mathrm{~g}} \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \frac{100 \mathrm{~cm}}{1 \mathrm{~m}}=\frac{(3)(100)(100)(100)}{1000} \mathrm{~kg} / \mathrm{m}^{3}=3000 \mathrm{~kg} / \mathrm{m}^{3}$
25. $\frac{200 \mathrm{lb}}{1 \text { in }^{2}} \frac{1 \text { ton }}{2000 \mathrm{lb}} \frac{12 \mathrm{in}}{1 f t} \frac{12 \mathrm{in}}{1 f t}=\frac{(200)(12)(12)}{2000}$ tons $/ \mathrm{ft}{ }^{2}=14.4$ tons $/ \mathrm{ft}^{2}$
26. $\frac{100 \mathrm{~km}}{1 \mathrm{hr}} \frac{1000 \mathrm{~m}}{1 \mathrm{~km}} \frac{1 \mathrm{hr}}{60 \mathrm{~min}} \frac{1 \mathrm{~min}}{60 \mathrm{sec}}=\frac{(100)(1000)}{(60)(60)} \mathrm{m} / \mathrm{sec}=27.78 \mathrm{~m} / \mathrm{sec}$
27. $\frac{100 \mathrm{~m}}{1 \sec } \frac{1 \mathrm{~km}}{1000 \mathrm{~m}} \frac{60 \mathrm{sec}}{1 \mathrm{~min}} \frac{60 \mathrm{~min}}{1 \mathrm{hr}}=\frac{(100)(60)(60)}{1000} \mathrm{~km} / \mathrm{hr}=360 \mathrm{~km} / \mathrm{hr}$
28. $\frac{2 c c}{1 \sec } \frac{1 m l}{1 c c} \frac{1 L}{1000 m l} \frac{60 \mathrm{sec}}{1 \mathrm{~min}} \frac{60 \mathrm{~min}}{1 h r}=\frac{(2)(60)(60)}{1000} L / h r=7.2 L / h r$
29. $\frac{2 \mathrm{~m}^{3}}{1} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{1 \mathrm{~mL}}{1 \mathrm{~cm}^{3}} \cdot \frac{1 L}{1000 \mathrm{~mL}}=\frac{(2)(100)(100)(100)}{1000} L=2000 L$
30. $\frac{4 m^{2}}{1} \cdot \frac{39.37 \mathrm{in}}{1 m} \cdot \frac{39.37 \mathrm{in}}{1 m} \cdot \frac{1 \mathrm{ft}}{12 \mathrm{in}} \cdot \frac{1 \mathrm{ft}}{12 \mathrm{in}}=\frac{4(39.37)(39.37)}{(12)(12)} \mathrm{ft}^{2} \approx 43.05 \mathrm{ft}^{2}$
31. $\frac{9 q t}{1} \cdot \frac{1 L}{1.0567 q t} \cdot \frac{1000 \mathrm{~mL}}{1 L} \cdot \frac{1 \mathrm{~cm}^{3}}{1 \mathrm{~mL}} \cdot \frac{1 \mathrm{~m}}{100 \mathrm{~cm}} \cdot \frac{1 \mathrm{~m}}{100 \mathrm{~cm}} \cdot \frac{1 \mathrm{~m}}{100 \mathrm{~cm}}=\frac{9(1000)}{(1.0567)(100)(100)(100)} m^{3} \approx .0085$
32. $\frac{1,000,000 \text { grains }}{1} \cdot \frac{.065 \mathrm{~g}}{1 \text { grain }} \cdot \frac{1 \mathrm{~kg}}{1000 \mathrm{~g}} \cdot \frac{2.2 \mathrm{lbs}}{1 \mathrm{~kg}}=\frac{(1,000,000)(.065)(2.2)}{1000} \mathrm{lbs}=143 \mathrm{lbs}$
$\frac{3.2 \mathrm{mg}}{1 \mathrm{~mm}^{3}} \cdot \frac{1 \mathrm{~g}}{1000 \mathrm{mg}} \cdot \frac{1 \mathrm{~kg}}{1000 \mathrm{~g}} \cdot \frac{2.2 \mathrm{lbs}}{1 \mathrm{~kg}} \cdot \frac{16 \mathrm{oz}}{1 \mathrm{lb}} \cdot \frac{1000 \mathrm{~mm}}{1 \mathrm{~m}} \cdot \frac{1000 \mathrm{~mm}}{1 \mathrm{~m}} \cdot \frac{1000 \mathrm{~mm}}{1 \mathrm{~m}} \cdot \frac{1 \mathrm{~m}}{39.37 \mathrm{in}} \cdot \frac{1 \mathrm{~m}}{39.37 \mathrm{in}} \cdot \frac{1 \mathrm{~m}}{39.37 \mathrm{in}}=$
33. 

$$
\frac{(3.2)(2.2)(16)(1000)(1000)(1000)}{(1000)(1000)(39.37)(39.37)(39.37)} \frac{o z}{\mathrm{in}^{3}} \approx 1.85 \frac{\mathrm{oz}}{\mathrm{in}^{3}}
$$

67. $\frac{4 \text { hours }}{175 \text { miles }} \cdot \frac{1 \text { mile }}{5280 f t} \cdot \frac{60 \mathrm{~min}}{1 \text { hour }}=\frac{(4)(60)}{(175)(5280)} \mathrm{min} / f t=.0002597 \mathrm{~min} / f t$;

The car will take approximately .26 minutes to travel 1000 feet.
69. $\frac{175 \text { miles }}{4 h o u r s} \cdot \frac{5280 \mathrm{ft}}{1 \text { mile }} \cdot \frac{1 \mathrm{hour}}{60 \mathrm{~min}}=\frac{(175)(5280)}{(4)(60)} \mathrm{ft} / \mathrm{min}=3850 \mathrm{ft} / \mathrm{min}$;

In 10 minutes the car would travel $(10)(3850) \mathrm{ft}=38500 \mathrm{ft}$.
71. $\frac{75 \mathrm{mi}}{1 \mathrm{hr}} \cdot \frac{5280 \mathrm{ft}}{1 \mathrm{mi}} \cdot \frac{1 \mathrm{hr}}{60 \mathrm{~min}} \cdot \frac{1 \mathrm{~min}}{60 \mathrm{sec}}=\frac{(75)(5280)}{(60)(60)} \mathrm{ft} / \mathrm{sec}=110 \mathrm{ft} / \mathrm{sec}$

In 10 seconds the car will travel $(10)(110) \mathrm{ft} .=1100 \mathrm{ft}$.
73. $\frac{1 \mathrm{pt}}{1 \text { hour }} \cdot \frac{1 q \mathrm{t}}{2 \mathrm{pt}} \cdot \frac{1 \mathrm{gal}}{4 q t} \cdot \frac{24 \text { hours }}{1 \text { day }}=\frac{24}{(2)(4)} \mathrm{gal} / \mathrm{day}=3 \mathrm{gal} / \mathrm{day}$
75. $\frac{1 \mathrm{hour}}{1 p t} \cdot \frac{2 \mathrm{pt}}{1 q t} \cdot \frac{4 q \mathrm{t}}{1 \text { gal }}=8$ hours $/ \mathrm{gal}$;

It would take $(10)(8)$ hours $=80$ hours to fill a 10 gallon container.
77. $\frac{5 L}{24 \text { hours }} \cdot \frac{1 \text { hour }}{60 \min } \cdot \frac{1000 \mathrm{~mL}}{1 L} \cdot \frac{1 c c}{1 m L}=\frac{(5)(1000)}{(24)(60)} \mathrm{cc} / \mathrm{min}=3.47 c c / \mathrm{min}$
79. $\frac{2.5 c c}{1 \mathrm{~min}} \cdot \frac{60 \mathrm{~min}}{1 \text { hour }} \cdot \frac{1 \mathrm{~mL}}{1 c c} \cdot \frac{1 L}{1000 \mathrm{~mL}}=\frac{(2.5)(60)}{1000} L /$ hour $=.15 L /$ hour ;

You would need (8)(.15) $\mathrm{L}=1.2 \mathrm{~L}$ in 8 hours.
81. $\frac{300 \mathrm{~mL}}{1} \cdot \frac{1 p t}{480 \mathrm{~mL}}=\frac{300}{480} p t=\frac{5}{8} p t$, also $\frac{5}{8} p t \cdot \frac{2 \text { cups }}{1 p t}=1 \frac{1}{4}$ cups and $\frac{300 \mathrm{~mL}}{1} \cdot \frac{1 \mathrm{Tbs}}{30 \mathrm{~mL}}=10 \mathrm{Tbs}$
83. $\frac{100 \mathrm{~km}}{1 \mathrm{hr}} \cdot \frac{.6214 \text { miles }}{1 \mathrm{~km}} \cdot \frac{5280 \mathrm{ft}}{1 \text { mile }} \cdot \frac{1 \mathrm{hr}}{60 \mathrm{~min}} \cdot \frac{1 \mathrm{~min}}{60 \mathrm{sec}}=\frac{(100)(.6214)(5280) \mathrm{ft}}{(60)(60) \mathrm{sec}} \approx 91.14 \mathrm{ft} / \mathrm{sec}$
85. $\mathrm{C}=\pi \mathrm{d}=2 \pi \mathrm{r} ; \mathrm{C}=\pi 27 \mathrm{in}$.; 1 revolution $=1 \mathrm{rev}=1$ circumference $=27 \pi \mathrm{in}$;
$\frac{1 \text { mile }}{1} \cdot \frac{5280 \mathrm{ft}}{1 \mathrm{mile}} \cdot \frac{12 \mathrm{in}}{1 \mathrm{ft}} \cdot \frac{1 \mathrm{rev}}{27 \pi \mathrm{in}}=\frac{(5280)(12)}{27 \pi} \mathrm{rev} \approx 747 \mathrm{rev}$
87. $\frac{1000 \mathrm{in}}{1} \cdot \frac{1 \mathrm{~m}}{39.37 \mathrm{in}}=\frac{1000}{39.37} m \approx 25.4 \mathrm{in}$
89. Volume $=2.3 \mathrm{~m} \times 3.4 \mathrm{~m} \times 5 \mathrm{~m}=39.1 \mathrm{~m}^{3}$;
$\frac{39.1 \mathrm{~m}^{3}}{1} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{100 \mathrm{~cm}}{1 \mathrm{~m}} \cdot \frac{1 \mathrm{~mL}}{1 \mathrm{~cm}^{3}} \cdot \frac{1 t b s p}{15 \mathrm{~mL}}=\frac{(39.1)(100)(100)(100)}{15} \mathrm{tbsp} \approx 2,600,000 \mathrm{tbsp}$
91. $\frac{1 \text { part }}{2.3 \mathrm{~min}} \cdot \frac{60 \mathrm{~min}}{1 \mathrm{hr}}=\frac{60}{2.3} \frac{\text { parts }}{\mathrm{hr}} \approx \frac{26.1 \text { parts }}{1 \text { hour }}=\frac{(8)(26.1) \text { parts }}{8 \text { hours }} ; 208.8$ parts in 8 hours
93. $\frac{2.3 \mathrm{~min}}{1 \text { part }} \cdot \frac{1 \mathrm{hr}}{60 \mathrm{~min}}=\frac{2.3}{60} \frac{\mathrm{hr}}{\text { part }} \approx .0383 \frac{\mathrm{hr}}{\text { part }}=\frac{(.0383)(5000) \mathrm{hrs}}{5000 \text { parts }}$;

It will take approximately 192 hours to produce 5000 parts.
95. $\frac{8 \mathrm{mg}}{100 \mathrm{lbs}} \cdot \frac{238 \mathrm{lbs}}{1}=19.04 \mathrm{mg}$ each day; 19.04 mg each day x 365 days $=6949.6 \mathrm{mg}$
$\frac{6949.6 \mathrm{mg}}{1} \cdot \frac{1 \mathrm{~g}}{1000 \mathrm{mg}} \cdot \frac{1 \mathrm{~kg}}{1000 \mathrm{~g}}=\frac{6949.6}{(1000)(1000)} \mathrm{kg}=.0069496 \mathrm{~kg}$
In one year, John would take approximately .007 kg .
